**Subject:** Lethal gas/oil wells: Anthony Ingraffea at TEDxAlbany 2013

[https://youtu.be/Dxis-vYGM\\_M](https://youtu.be/Dxis-vYGM_M)

In this presentation ingraffea uses industry data to show that modern wells have not improved there well integrity. The failures are not just 1 barrier or zone the leakage is leaking methane into the water and or atmosphere. Further more confirmed reports of ground water contamination rendering the water undrinkable. These figures and findings are very different from CSIRO's findings they tell a completely different story.
